

## Weekly Perimeter Air Monitoring Summary

**Client:** **Massachusetts Department of Conservation and Recreation**

---

**Location:** **Pittsfield, Massachusetts**

---

**Period:** **2/9/26 – 2/15/26**

---

On behalf of the Massachusetts Department of Conservation and Recreation (MassDCR), AECOM Technical Services, Inc. (AECOM) has prepared this data summary for the Bel Air Dam remediation site (the "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data was collected during the reporting period at the Site in accordance with the Perimeter Air Monitoring Plan (PAMP) prepared by AECOM (2025). Remedial activities are planned for a 5-day work week, Monday through Friday.

### Scope

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to document ambient air quality conditions at the fenceline and ensure that the measures used to control potential fugitive emissions are effective. The monitoring program consists of the following real-time monitoring and constituent-specific sampling:

- Real-time continuous monitoring for total volatile organic compounds (TVOCs) and particulate matter 10 microns or less (PM<sub>10</sub>) performed at four (4) air monitoring stations (AMS) in the sediment removal area and one (1) AMS in the sediment processing area during work hours.
- Routine instantaneous hand-held monitoring for TVOCs and PM<sub>10</sub>, as well as observational monitoring for odor and visible dust conducted routinely during periods of construction activities.
- Continuous meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day, 7 days per week.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert and Action Levels, and the chemical-specific sampling results are compared to Acceptable Air Concentrations (AACs) developed for the Site. The Action Levels and AACs are defined in the following tables:

- **Table 1:** Site-Specific Alert and Action Levels; and
- **Table 2:** Acceptable Air Concentrations.

### Real-Time Monitoring Summary

Real-time continuous TVOC and PM<sub>10</sub> monitoring was conducted at each of the five (5) AMS. In addition, hand-held monitoring for TVOCs and PM<sub>10</sub> was conducted, as well as observational odor and visible dust assessments.

During the report period, the TVOC and PM<sub>10</sub> concentrations remained less than the Action Levels, there were no off-Site odor complaints, and no observations of visible dust moving off-Site. The results of the real-time air monitoring are presented in the following tables:

- **Table 3:** Real-Time TVOC and PM<sub>10</sub> Concentrations Summary;
- **Table 4:** Project-to-Date TVOC and PM<sub>10</sub> Average Concentrations Summary;
- **Table 5:** Daily Maximum Hand-held Concentrations Summary; and
- **Table 6:** Weekly Alert and Action Level Event Summary.

**Naphthalene Sampling Summary**

Chemical-specific sampling for naphthalene was conducted at each of the AMS for 24-hour periods once per week during sediment removal activities in the northern portion of the work zone. Samples were shipped to the analytical laboratory for USEPA TO-15 analysis. The results of sampling were provided following receipt from the analytical laboratory and are included in the following table:

- **Table 7:** Naphthalene Sampling Results Summary.

**Meteorological Conditions and Site Map**

Meteorological monitoring summaries and a Site map for the report period are included in the following figures:

- **Figure 1:** Meteorological Summaries; and
- **Figure 2:** Site Map(s).

**Table 1: Site-Specific Alert and Action Levels**

Target Constituent	Alert Level	Action Level
<b>TVOC</b> (15-minute average or instantaneous concentration)	One (1) concentration > 1.0 ppm	Two (2) concentrations > 1.0 ppm
<b>PM<sub>10</sub></b> (15-minute average or instantaneous concentration)	One (1) concentration > 150 µg/m <sup>3</sup>	Two (2) concentrations > 150 µg/m <sup>3</sup>
<b>Odor</b> (Instantaneous observation related to Site activities)	Not Applicable	On-Site odor > 3 or public complaints that are verified to be related to construction
<b>Visible Dust</b> (Instantaneous observation related to Site activities)	Not Applicable	Observation of visible dust moving off-Site

**Definitions:**

TVOC – Total volatile organic compounds  
 ppm – Parts per million  
 PM<sub>10</sub> – Respirable particulate matter  
 µg/m<sup>3</sup> – Micrograms per cubic meter

**Table 2: Acceptable Air Concentrations**

COC	AAC µg/m <sup>3</sup>	Project Goal µg/m <sup>3</sup>
PM <sub>10</sub>	150	120
Naphthalene	1.43	1.14

**Definitions:**

AAC – Acceptable Air Concentration  
 COC – Chemical of concern  
 PM<sub>10</sub> – Particulate matter with a diameter of 10 micrometers or less in diameter.  
 µg/m<sup>3</sup> – Micrograms per cubic meter

**Notes:**

- Project Goal is defined as an internal project goal equal to 80% of the AAC.

**Table 3: Real-Time TVOC and PM<sub>10</sub> Concentrations Summary**

<b>Weekly Summary</b>										
<b>Weekly Maximum</b>	0.0	50.0	0.0	43.9	0.0	58.1	0.0	78.1	0.0	55.7
<b>Weekly Average</b>	0.0	10.8	0.0	20.7	0.0	7.6	0.0	11.7	0.0	12.4
<b>Definitions:</b>			<b>Notes:</b>							
AMS – Air Monitoring Station			- Highlighted concentrations (if any) require further analysis (see <b>Table 5</b> ).							
TVOC – Total Volatile Organic Compounds			- AMS reported TVOC and PM <sub>10</sub> data represent 15-minute average concentrations.							
ppm – Parts per million			- Project-to-date average PM <sub>10</sub> concentrations are compared to the PM <sub>10</sub> AAC to evaluate the effectiveness of the perimeter air monitoring program with relation to particulates. Compliance will be determined at the end of the project.							
PM <sub>10</sub> – Particulate Matter 10 micrometers or less			- Project-to-date average TVOC and PM <sub>10</sub> concentrations are calculated from 6/23/25 through the end of the reporting period.							
µg/m <sup>3</sup> – Micrograms per cubic meter			- Baseline results are not included in project-to-date averages.							
PTD – Project-to-date			- AMS-2, AMS-3, and AMS-4 were removed from service on 11/14/25 and AMS-C and AMS-D were deployed on 11/17/25 in accordance with PAMP Revision 01 Memorandum dated 11/21/25.							
ND – No Data			- AMS-1 was removed from service on Friday, 2/13/26 in accordance with PAMP Revision 02 Memorandum dated 2/20/26.							
NA – Not Applicable			<sup>1</sup> Ground-intrusive work was not performed due to inclement weather, therefore there was no air monitoring.							
			<sup>2</sup> Data missing due to an instrument malfunction related to power failure.
